

STRATHCLYDE UNIVERSITY

2020

Project Title: Strathclyde University's Learning & Teaching Building
Location: Glasgow, Scotland
Clips used: Over 10,000

In the development of the Strathclyde University Learning and Teaching Building, Balfour Beatty used **over 10,000 LINIAN clips**. Utilising them for the speed of install, they were able to adhere to their faster delivery times, installing cabling **up to 72% faster** than their traditional installation methods. Our clips helped them to improve their efficiency on site without the need for additional tools and equipment and lengthy training courses, which really confirms our message of being faster, safer and simpler.

Our clips also helped secure vital cabling neatly which created an aesthetically pleasing finish on the building's industrial and exposed look, all while staying compliant to fire and safety regulations.

The clips are a great product... will definitely be getting used on future projects"
